

## Le parapluie des constellations

Hémisphère sud

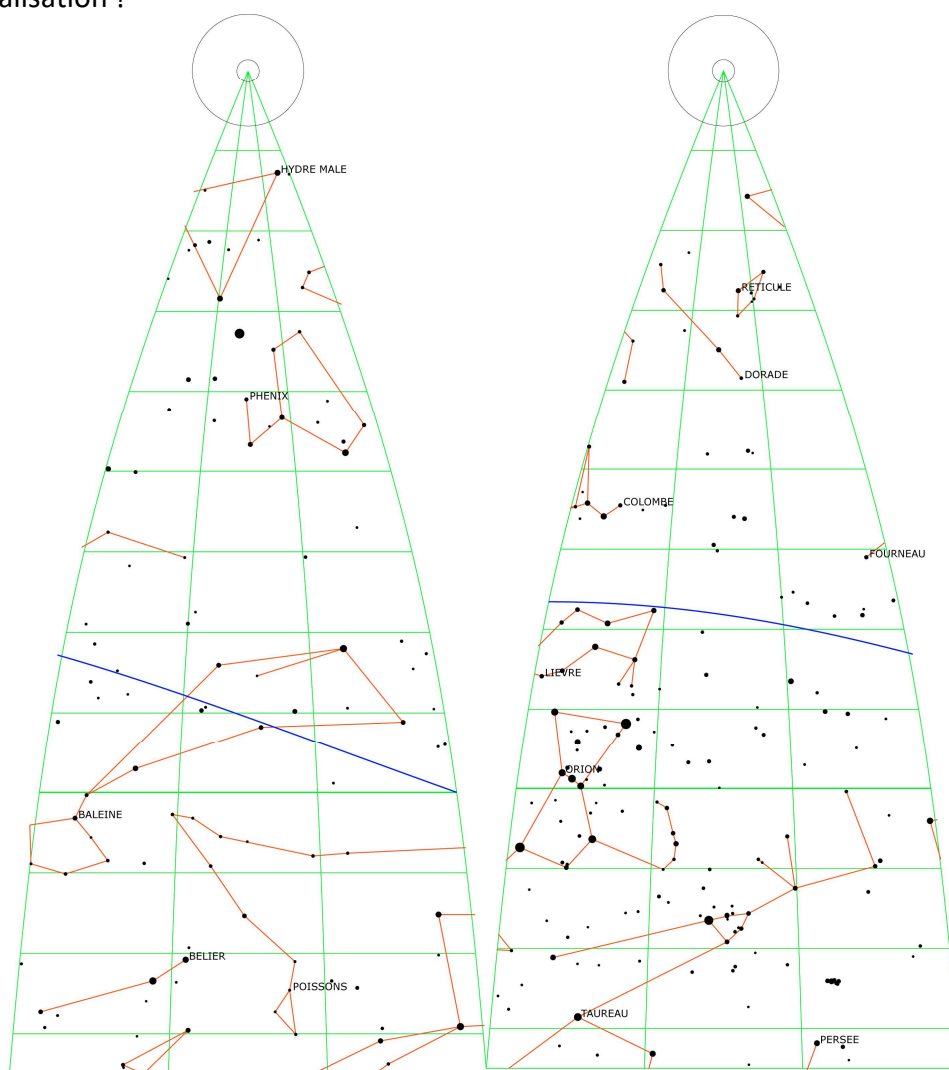

Vous trouverez dans les 32 pages qui suivent les 8 patrons pour représenter le ciel sur un parapluie transparent.

Il faut 4 pages successives pour réaliser le patron d'un secteur, entre deux baleines. Un parapluie compte 8 secteurs.

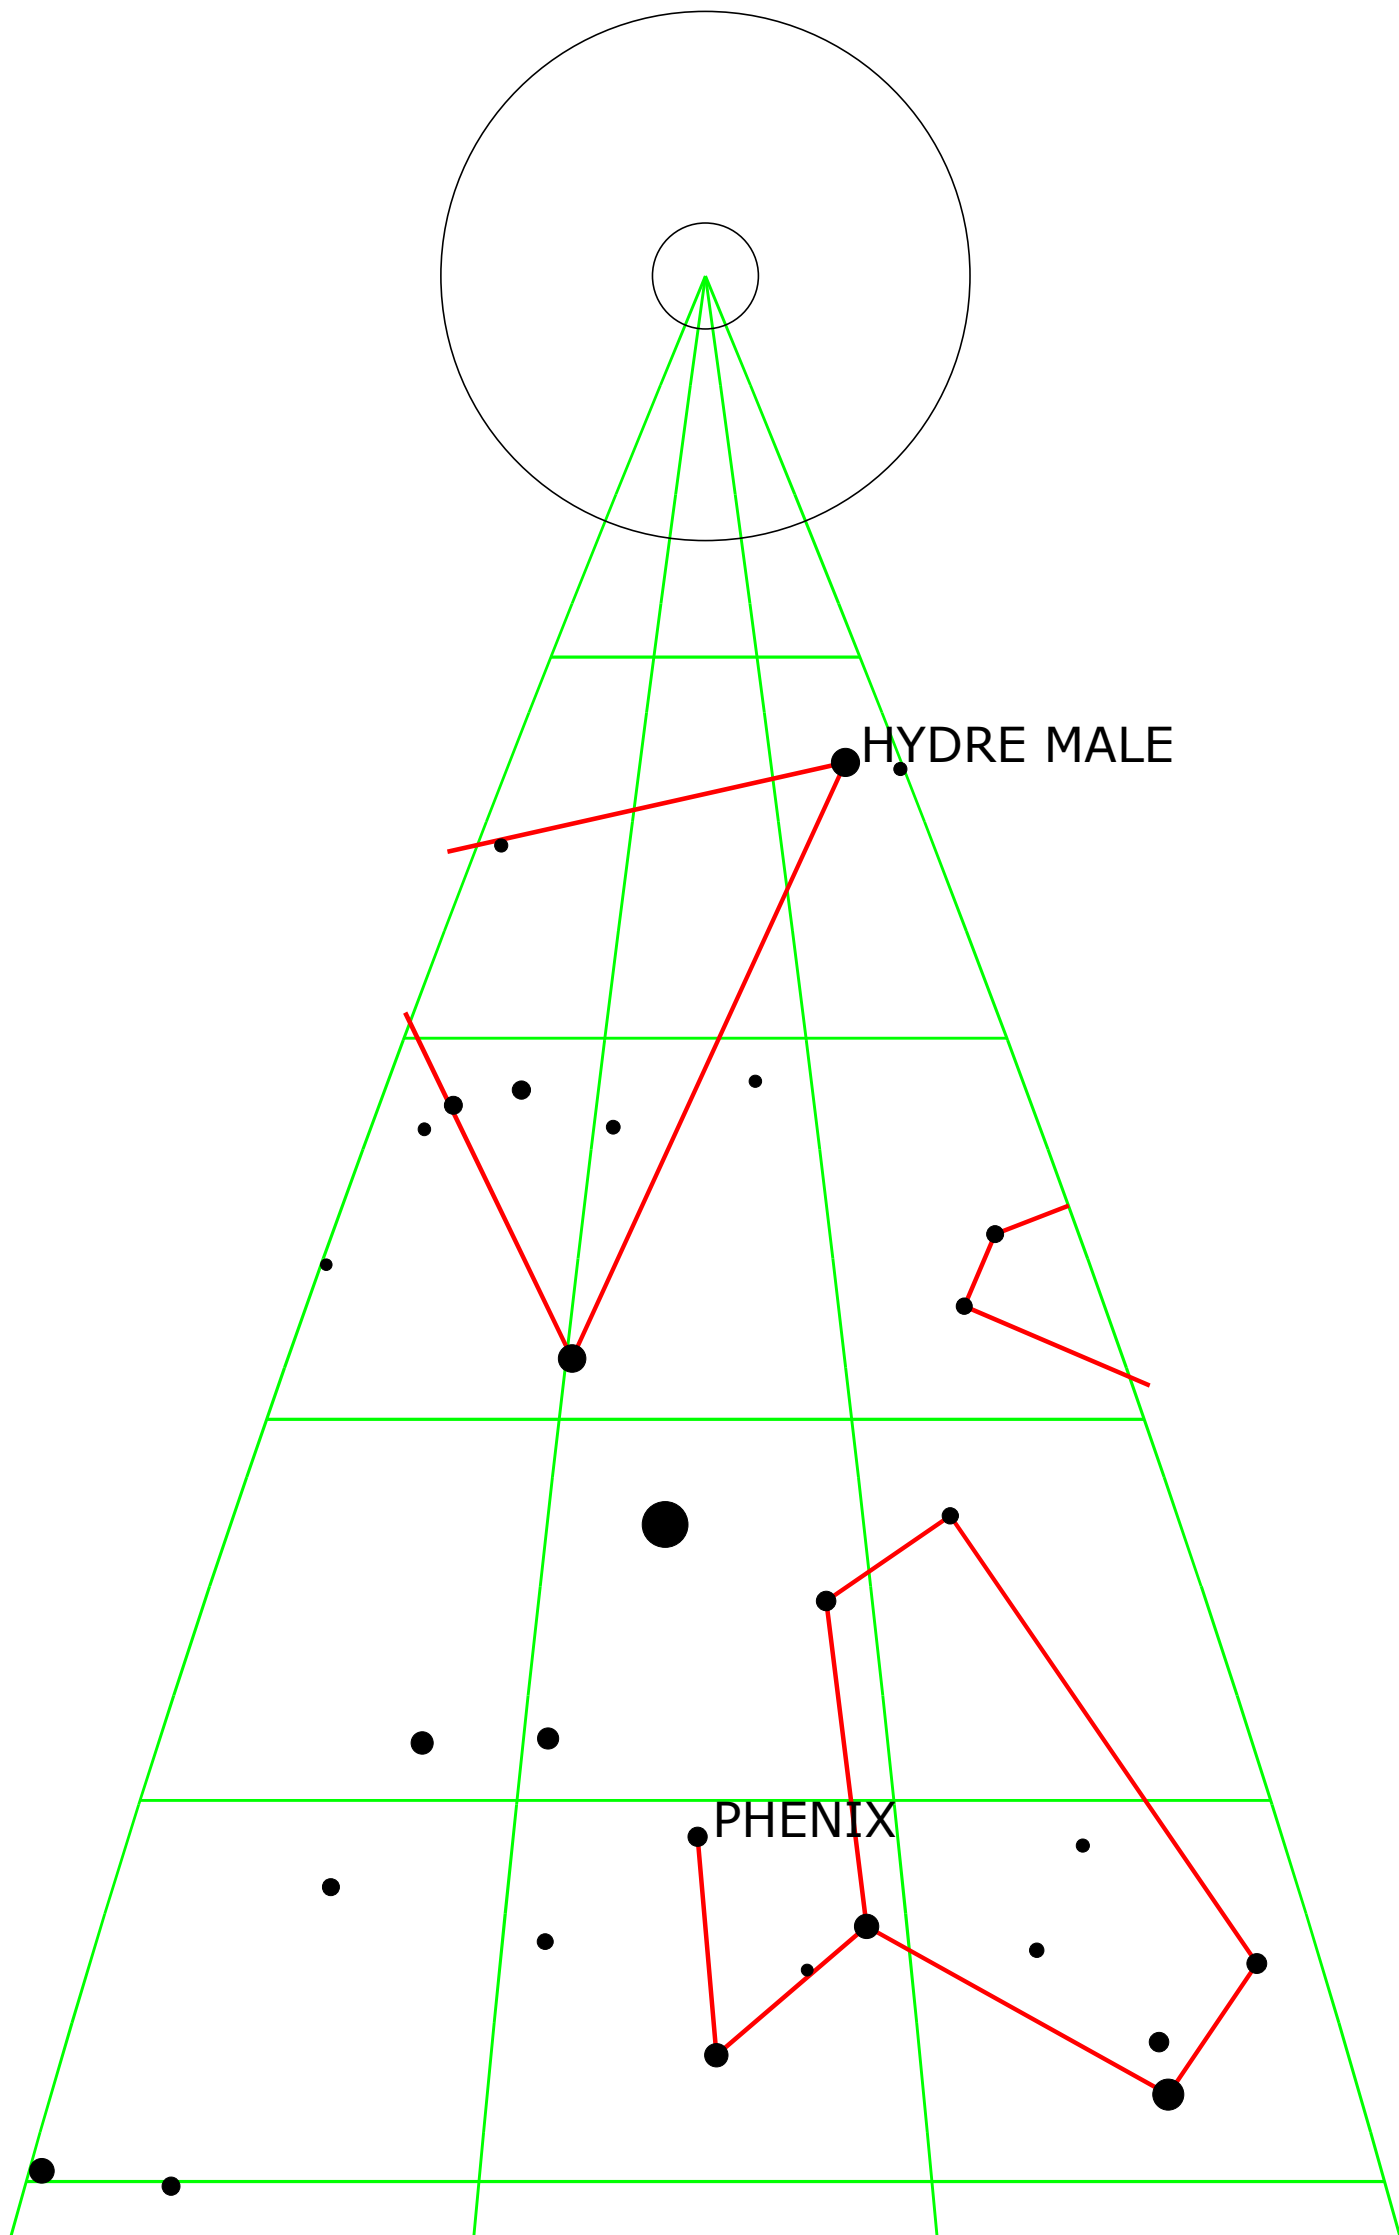

Pour vérifier si ce patron peut s'adapter à votre parapluie, il est conseillé d'imprimer tout d'abord 4 pages successives puis de les assembler pour réaliser le patron d'un secteur. Le petit cercle doit être découpé pour s'insérer dans le « pôle » du parapluie.

Pour éviter que le papier ne se déchire au niveau du « pôle », on pourra le renforcer avec du papier épais ou du bristol.

Bonne réalisation !
